Art Unit: 1762

1. Applicant's election without traverse of Group I, claims 1-4, in Paper No. 4 is acknowledged. Claims 5-10 are directed toward a non-elected invention and should be canceled.

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 4 recites the limitation "said at least one solder-wettable region". There is insufficient antecedent basis for this limitation in the claim. Antecedent basis is found in claim 3 but not in claim 1 as recited.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carey et al. (5,597,469) or Dibble et al. (5,316,788) in combination with DiStefano et al. (6,324,754 B1).

Art Unit: 1762

Carey et al. (5,597,469) or Dibble et al. (5,316,788) both teach applying solder through a soldermask to a substrate having solder-wettable pads. The solder is reflowed and solidified to form the contact. Carey et al. (5,597,469) or Dibble et al. (5,316,788) both teach applying solder-wettable material to the soldermask prior to applying the solder thereby forming a soldermask having both solder-wettable areas and non solder-wettable areas.

Carey et al. (5,597,469) or Dibble et al. (5,316,788) both fail to teach cooling the solder to solidfy to solder into a solder ball.

DiStefano et al. (6,324,754 B1) teaches cooling applied solder to solidfy in solder balls.

Therefore, it would have been obvious for one skilled in the art at the time the invention was made to have modified Carey et al. (5,597,469) or Dibble et al. (5,316,788) process by cooling the applied solder as evidenced by DiStefano et al. (6,324,754 B1) with the expectation of achieving similar results.
